Churn & Retention

MONTHLY CHURN EVOLUTION

ROOT CAUSE ANALYSIS

Le taux de churn global observé est de 3,7 % avec un taux de churn trial de 63,5 %. Les analyses de rétention et les cohortes sont disponibles dans les tableaux de bord.

90-DAY CHURN FORECAST

Churn is projected to remain between 3.2% and 4.2% over the next 90 days. Early re-engagement interventions at D+1 could reduce trial churn by an estimated 8-12 percentage points. Without intervention, the 302 high-risk users are projected to churn within 30 days.

Trial churn:
63.5%

D7: 45.2%

D30: 62.1%

Paid		~7%

SESSION ANALYSIS

Session volume peaks between 19:00–22:00 local time across all services. Average session duration is 12.4 minutes for active subscribers, declining to 4.2 minutes for trial users. Weekend sessions show 23% higher engagement than weekday sessions.

TRIAL OPTIMIZATION

Implement personalized nudges at J+1 (content suggestion) and J+3 (value highlight) to reduce early drop-off. Deploy a Day 25 retention offer for users with 3+ sessions. Expected impact: 8–12 point reduction in trial churn (63.5% → ~54%).
