

01 Executive Summary

Period 2025-09-01 – 2025-10-31

TOTAL SUBSCRIBERS 945,5 ▲ +12% growth	CHURN RATE 3.7% ▼ -0.4% vs previous	AVERAGE ARPU 12.4 TND ▲ +0.3 TND	CONVERSION 6.8% ▲ ++1.2%	D30 RETENTION 62.1% → Stable	AT RISK 302 ⚠ To monitor
CONVERSION 6.8% ▲ ++1.2%	D30 RETENTION 62.1% → Stable	AT RISK 302 ⚠ To monitor			

STRATEGIC PRIORITIES Our top strategic priority is to drastically reduce the 63.5% trial churn rate, aiming for a 15–20% improvement, which could boost paying users by over 10,000. Secondly, we must address the high churn within the 'Power Users' (23.6%) and 'Regular Loyals' (23.2%) segments to protect high-value revenue streams. Finally, optimizing the 45.0% technical churn component is crucial for improving overall customer satisfaction and reducing involuntary churn, leading to a more stable subscriber base.	PREDICTIVE FORECAST Assuming current trends and a stable market, we project a modest user base growth of 1–2% and a revenue increase of 3–5% for the next quarter, reaching approximately \$2.8M – \$2.9M, with a moderate confidence level. This forecast is contingent on maintaining the current ARPU and conversion rate, and does not account for significant improvements in trial conversion or churn reduction. Proactive interventions could significantly uplift these projections.	EXPECTED KPI IMPROVEMENTS Following the recommended actions, we project a 15–20% improvement in the conversion rate (from 6.8%), leading to a significant increase in paying users. The trial churn rate is expected to decrease by 20–30% (from 63.5%), while overall churn rate could see a 5–10% reduction (from 3.7%). We anticipate a 5–10% increase in ARPU (from \$12.4) through upselling and premium feature adoption, and d30 retention is projected to improve by 5–8% (from 62.1%).

02 Churn & Retention

MONTHLY CHURN EVOLUTION <table><thead><tr><th>Segment</th><th>Churn Rate (%)</th></tr></thead><tbody><tr><td>S1</td><td>2.0</td></tr><tr><td>S2</td><td>2.8</td></tr><tr><td>S3</td><td>3.0</td></tr><tr><td>S4</td><td>3.3</td></tr><tr><td>S5</td><td>3.1</td></tr><tr><td>S6</td><td>3.5</td></tr><tr><td>S7</td><td>3.4</td></tr><tr><td>S8</td><td>3.7</td></tr></tbody></table>	Segment	Churn Rate (%)	S1	2.0	S2	2.8	S3	3.0	S4	3.3	S5	3.1	S6	3.5	S7	3.4	S8	3.7	ROOT CAUSE ANALYSIS The primary root cause of churn is the extremely high 63.5% trial churn, indicating a significant bottleneck in converting initial interest into sustained engagement across services like ElJournal By TT and Esports By TT. Furthermore, the substantial churn rates among 'Power Users' (23.6%) and 'Regular Loyals' (23.2%) suggest potential issues with long-term value perception or service satisfaction, possibly related to specific features within Rafi9ni+ or Smarttoons. The 45.0% technical churn component points to underlying platform stability or usability issues that need immediate investigation and resolution across all services.
Segment	Churn Rate (%)																		
S1	2.0																		
S2	2.8																		
S3	3.0																		
S4	3.3																		
S5	3.1																		
S6	3.5																		
S7	3.4																		
S8	3.7																		
90-DAY CHURN FORECAST Based on current trends, we forecast the global churn rate to remain around 3.5–4.0% over the next 30–60 days if no significant interventions are made. The trial churn rate is expected to persist at approximately 60–65% for the next 90 days, continuing to hinder growth. Without targeted actions, the churn rates for 'Power Users' and 'Regular Loyals' will likely remain above 20%, posing a continuous threat to high-value segments.																			
Trial churn: 63.5% D7: 45.2% D30: 62.1%																			

03 Retention Cohorts

SESSION ANALYSIS

While specific data is not provided, analyzing session activity charts would reveal peak usage hours and days for services like Esports By TT and ElJournal By TT, indicating optimal times for targeted communications and platform maintenance. Identifying periods of high engagement versus low activity can inform content scheduling and resource allocation, ensuring a seamless user experience. This data is crucial for understanding user behavior patterns and optimizing service delivery.

TRIAL OPTIMIZATION

To significantly improve the 63.5% trial-to-paid conversion, implement AI-driven personalized onboarding sequences that highlight relevant features based on initial user behavior within services like ElJournal By TT or Smarttoons. Deploy smart nudges and targeted offers (e.g., a 20% discount for the first month) to users showing high engagement but low conversion intent. Utilize predictive analytics to identify high-potential trial users for proactive outreach and support, focusing on services with higher perceived value.
