PRIORITÉS STRATÉGIQUES

1. Reduce trial churn from 63.5% via personalized onboarding nudges at J+1 and J+3. 2. Expand premium catalog on high-ARPU services to capture value-seeking segments. 3. Deploy automated re-engagement campaigns targeting the 302 high-risk subscribers identified.

PRÉVISION PRÉDICTIVE

Based on current trajectory, predictive models estimate the platform will maintain approximately 43,214 active users next quarter with a churn variance of ±0.3%. Revenue growth is projected at 4-7% QoQ assuming campaign ROI holds at 3.5x.

AMÉLIORATIONS KPI ATTENDUES

With full recommendation adoption: Active users +5% → ~45,374. Churn rate: 3.7% → ~2.5%. ARPU: +8-12% increase. Trial conversion: 6.8% → ~9.3%. D30 retention: 62.1% → ~77%. Campaign ROI: 3.5x → ~4.3x.

02 Churn & Rétention

ÉVOLUTION MENSUELLE DU CHURN

ANALYSE DES CAUSES RACINES

Churn risk is moderate at 3.7% globally, driven primarily by trial user attrition (63.5%). D7 retention at 45.2% suggests early engagement barriers. Service-level analysis indicates lower-tier services contribute disproportionately to voluntary churn.

PRÉVISION CHURN 90J

Churn is projected to remain between 3.2% and 4.2% over the next 90 days. Early re-engagement interventions at D+1 could reduce trial churn by an estimated 8-12 percentage points. Without intervention, the 302 high-risk users are projected to churn within 30 days.

Trial churn: 63.5%

D7: 45.2%

D30: 62.1%

ANALYSE DES SESSIONS

Session volume peaks between 19:00–22:00 local time across all services. Average session duration is 12.4 minutes for active subscribers, declining to 4.2 minutes for trial users. Weekend sessions show 23% higher engagement than weekday sessions.

OPTIMISATION ESSAI

Implement personalized nudges at J+1 (content suggestion) and J+3 (value highlight) to reduce early drop-off. Deploy a Day 25 retention offer for users with 3+ sessions. Expected impact: 8–12 point reduction in trial churn (63.5% → ~54%).

ANALYSE DE MIGRATION

User migration patterns show a dominant flow from Trial-only to Occasional segments, with only 2.2% reaching Power User status. Segment transitions are primarily driven by content engagement depth and subscription tenure beyond 30 days.

MATRICE RENTABILITÉ

Segment profitability ranks: Premium (highest ARPU, lowest churn) > Loyal Regulars > Occasional > Trial-only. Focusing retention investments on the Loyal-to-Premium transition offers the highest marginal ROI per user.

STRATÉGIE CAMPAGNES

Campaign ROI at 3.50x across 12 campaigns suggests expanding high-performing channels, particularly evening and weekend slots. SMS campaigns targeting churning segments within 48h of inactivity show the highest re-activation rates. Revenue attribution analysis recommends prioritizing segmented night campaigns with D+7 conversion tracking.
