STRATEGIC PRIORITIES

The top strategic priority is to drastically reduce the 63.5% trial churn rate, which is currently hindering overall growth and profitability. Secondly, focus on enhancing the value proposition and retention strategies for high-value segments like 'Power Users' (2.2% of users, \$24.5 ARPU) and 'Regular Loyals' (2.4% of users, \$8.3 ARPU), both exhibiting concerning churn rates above 23%. Finally, address the 45% technical churn to improve overall service quality and user satisfaction.

PREDICTIVE FORECAST

Based on current trends, we project a modest user base growth of 1-2% for the next quarter, with revenue growth potentially reaching 3-5% if trial conversion improves. Without intervention, the high trial churn rate will continue to suppress significant expansion, maintaining a confidence level of 70% in this forecast.

EXPECTED KPI IMPROVEMENTS

Following these recommendations, we anticipate a 10% increase in the overall conversion rate from 6.8% to 7.5%, and a 15% reduction in trial churn from 63.5% to approximately 54%. We also project a 5% decrease in the overall churn rate from 3.7% to 3.5%, leading to a 7-10% growth in paying users and a 5% increase in ARPU over the next two quarters.

02 Churn & Retention

MONTHLY CHURN EVOLUTION

ROOT CAUSE ANALYSIS

The primary driver of churn is the exceptionally high trial churn rate of 63.5%, indicating a failure to convert initial interest into sustained engagement. Of the overall churn, 55% is voluntary, suggesting issues with perceived value or user experience, while 45% is technical, pointing to underlying service quality or platform stability problems. Even high-value segments like 'Power Users' and 'Regular Loyals' show significant churn rates of 23.6% and 23.2% respectively, suggesting a need for targeted retention efforts beyond the trial phase.

90-DAY CHURN FORECAST

Given the current dynamics, the overall churn rate is predicted to remain stable around 3.7% for the next 30 days, with potential for a slight increase if trial churn is not addressed. Over 60-90 days, without significant intervention in trial conversion and high-value segment retention, the churn rate could see a marginal rise, particularly if the 45% technical churn persists.

Trial churn: 63.5%

D7: 45.2%

D30: 62.1%

03 Retention Cohorts

TAUX D7, D30, D90 PAR SERVICE

ElJournal	84.2%	62.1%	45.8%	HEALTHY
TToons	76.8%	44.5%	32.1%	ATTENTION
Tawer	68.4%	38.2%	24.5%	CRITICAL

04 Comportement Free Trial

SESSION ANALYSIS

While specific data is not provided, typical telecom behavioral patterns suggest peak session activity during evening hours (19:00-22:00) and weekends, particularly for content consumption services like 'ElJournal By TT' and 'Smarttoons'. Analyzing actual session data would reveal precise peak times, allowing for optimized content delivery, customer support staffing, and campaign scheduling.

TRIAL OPTIMIZATION

Implement personalized onboarding flows for trial users, highlighting key features relevant to their initial usage patterns. Introduce proactive in-app nudges and email campaigns offering tailored incentives (e.g., discounted first month) before the trial ends. A/B test different trial lengths and feature access levels to optimize conversion from the 63.5% trial churn.

TRIAL VS PAID CHURN

05 AI Segmentation

K-means k=4 · Silhouette: 0.72 · Confiance: 84%

Power Users	Regular Loyals
BASE 2.2%	BASE 2.4%
ARPU 24.5 TND	ARPU 8.3 TND
CHURN 23.6%	CHURN 23.2%
RETENTION 76.4%	RETENTION 76.8%

Occasional	Trial Only
BASE 3.4%	BASE 92.1%
ARPU 3.5 TND	ARPU 0.0 TND
CHURN 21.8%	CHURN 63.5%
RETENTION 78.2%	RETENTION 36.5%

MIGRATION ANALYSIS

The dominant migration pattern is from the 'Trial Only' segment (92.1%) directly to churn, with only a small fraction converting to 'Occasional' or 'Regular Loyals'. There is also a concerning migration from 'Power Users' and 'Regular Loyals' to churn, indicated by their high churn rates (23.6% and 23.2%). Optimizing the trial-to-paid journey and reinforcing loyalty for paying segments are crucial to shift these migration patterns.

PROFITABILITY MATRIX

'Power Users' lead in profitability with an ARPU of \$24.5, despite a 23.6% churn, making them a high-value, high-risk segment. 'Regular Loyals' follow with an ARPU of \$8.3 and a 23.2% churn, representing a stable but vulnerable revenue stream. 'Occasional' users contribute minimally with an ARPU of \$3.5, while the 'Trial Only' segment, despite its size (92.1%), contributes no ARPU and represents a significant cost center due to high churn.

AVG ROISMS EFFECTIVENESSENGAGEMENT

CAMPAIGN STRATEGY

Launch targeted re-engagement campaigns for trial users nearing their trial end, offering personalized incentives to convert, aiming for a 10-15% uplift in conversion. Implement a 'win-back' campaign for recently churned 'Power Users' and 'Regular Loyals', leveraging their past usage data for tailored offers. Given a campaign ROI of 3.5, investing in these focused campaigns is expected to yield positive returns.

07

User Activity

ACTIVITY TRENDS - DAILY SESSIONS

SESSION ANALYSIS

While specific data is not provided, typical telecom behavioral patterns suggest peak session activity during evening hours (19:00-22:00) and weekends, particularly for content consumption services like 'ElJournal By TT' and 'Smarttoons'. Analyzing actual session data would reveal precise peak times, allowing for optimized content delivery, customer support staffing, and campaign scheduling.
