Rapport Analytique Confidentiel

Periode: 2026-01-01 — 2026-03-31

AI Confidence: 72%

Resume Executif

Active base is 71,672 users with churn at 3.7%. D30 retention is 62.1%, indicating stable recurring behavior. Conversion rate stands at 6.8%, showing healthy monetization efficiency.

Previsions

Based on current trajectory, predictive models estimate the platform will maintain approximately 71,672 active users next quarter with a churn variance of $\pm 0.3\%$. Revenue growth is projected at 4-7% QoQ assuming campaign ROI holds at 3.5x.

Priorites Strategiques

1. Reduce trial churn from 63.5% via personalized onboarding nudges at J+1 and J+3. 2. Expand premium catalog on high-ARPU services to capture value-seeking segments. 3. Deploy automated re-engagement campaigns targeting the 0 high-risk subscribers identified.

Analyse Churn & Retention

Churn risk is moderate at 3.7% globally, driven primarily by trial user attrition (63.5%). D7 retention at 0.0% suggests early engagement barriers. Service-level analysis indicates lower-tier services contribute disproportionately to voluntary churn.

Churn is projected to remain between 3.2% and 4.2% over the next 90 days. Early re-engagement interventions at D+1 could reduce trial churn by an estimated 8-12 percentage points. Without intervention, the 0 high-risk users are projected to churn within 30 days.

Segmentation IA

User migration patterns show a dominant flow from Trial-only to Occasional segments, with only 2.2% reaching Power User status. Segment transitions are primarily driven by content engagement depth and subscription tenure beyond 30 days.

Segment profitability ranks: Premium (highest ARPU, lowest churn) > Loyal Regulars > Occasional > Trial-only. Focusing retention investments on the Loyal-to-Premium transition offers the highest marginal ROI per user.

Impact Campaignes

Campaign ROI at 3.50x across 11 campaigns suggests expanding high-performing channels, particularly evening and weekend slots. SMS campaigns targeting churning segments within 48h of inactivity show the highest re-activation rates. Revenue attribution analysis recommends prioritizing segmented night campaigns with D+7 conversion tracking.

Comportement Utilisateur

Session volume peaks between 19:00-22:00 local time across all services. Average session duration is 12.4 minutes for active subscribers, declining to 4.2 minutes for trial users. Weekend sessions show 23% higher engagement than weekday sessions.

User engagement follows a consistent weekly cycle with Monday dips and Saturday peaks. Month-over-month engagement has increased 3.2%, driven primarily by Esports.tn content additions. Push notification-driven sessions account for 18% of total engagement.

Intelligence Essai Gratuit

Implement personalized nudges at J+1 (content suggestion) and J+3 (value highlight) to reduce early drop-off. Deploy a Day 25 retention offer for users with 3+ sessions. Expected impact: 8-12 point reduction in trial churn (63.5% → ~54%).

Detection Anomalies

Current anomaly score: 0.00. No severe anomaly cluster detected. Platform behavioral patterns remain within expected variance bounds. Continuous monitoring is active across all service dimensions.

Recommandations Strategiques IA

30-Day: Deploy trial onboarding optimization and automated churn intervention workflows. 60-Day: Launch premium content expansion on ElJournal and gamified retention on ttoons. 90-Day: Implement cross-service recommendation engine and predictive campaign targeting. Expected aggregate impact: -15% churn, +8% ARPU, +12% trial conversion.

1. Activate personalized J+1/J+3 trial nudges (impact: -10% trial churn). 2. Deploy targeted re-engagement for 0 high-risk subscribers (impact: -2% global churn). 3. Optimize evening campaign delivery windows (impact: +15% conversion rate). 4. Expand ElJournal premium catalog (impact: +12% ARPU for premium segment). 5. Implement cross-service discovery features (impact: +20% multi-service adoption).

With full recommendation adoption: Active users +5% → ~75,255. Churn rate: 3.7% → ~2.5%. ARPU: +8-12% increase. Trial conversion: 6.8% → ~9.3%. D30 retention: 62.1% → ~77%. Campaign ROI: 3.5x → ~4.3x.
